DETAILED ACTION

Allowable Subject Matter

1. Claims 1-3, 6-17, 19, 20, amended claims 4, 5, and 18 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Regarding claims 1-3 and claims 4-5, prior arts do not disclose a Graceful Shutdown Notification message created by the processing element and sent to routing protocol peers to announce an intention of the intermediate node to be gracefully removed from service, the Graceful Shutdown Notification message further indicating that the intermediate node is able to continue forwarding packets over the network for a grace period, thereby allowing backup paths to be propagated to each peer and put into service prior to a final withdrawal of routes advertised by the intermediate node.

Regarding claims 6-14, the prior arts do not disclose modifying a routing protocol executing on the router to enable the router to announce to its peers in the network its intention to be gracefully removed from service and forwarding packets from the router over the network for a grace period.

Regarding claims 15-17, the prior arts do not disclose means for modifying a routing protocol executing on the router to enable the router to announce to its peers in the network its intention to be gracefully removed from service and means for forwarding packets from the router over the network for a grace period.

Regarding amended claim 18 and claims 19-20, the prior arts do not disclose modifying a routing protocol executing on the router to enable the router to announce to its peers

in the network its intention to be gracefully removed from service and forwarding packets from the router over the network for a grace period.

Conclusion

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

(1) US 2006/0045004 (Charzinski et al) discloses method for diverting data packets when local link failures are identified.

(2) US Patent 6,392,997 (Chen) discloses technique for group-based routing update with limited per neighbor/adjacency customization.
